Lombok Earthquake
Emergency Response 365 Days Report

31 July 2018 - 31 July 2019
Introduction

The Indonesian Meteorological, Climatology and Geophysics Agency (BMKG) reported a 6.4-magnitude earthquake struck off the north coast of Lombok Island, West Nusa Tenggara on Sunday, July 29, 2018 at 05:47h local time. The quake was centered 47 kilometers northeast of Mataram City and triggered by the activity of Flores Back-Arcthrust. No tsunami warning was sounded following the quake. North and East Lombok were the most impacted areas.

A week later, a 7-magnitude earthquake occurred on August 5, 2018 at 06:46h local time, centered 18 kilometers southwest of Lombok Island at the depth of 15 kilometers, and followed by a 6.5 magnitude earthquake on August 19, 2018 at 22:56h local time. It’s centered in East Lombok at the depth of 10 kilometers. The shallow depth and high magnitude of the earthquakes caused serious damages in buildings, while thousands of people were injured and displaced from their houses.

Total number affected:

- 3,512,689 people were affected
- 564 deaths
- 445,343 people were displaced
- 1,584 people injured
- 149,715 houses were damaged

Total number children affected:

- 59,603 pregnant women
- 72,582 infants
- 213,724 toddlers
- 304,526 children were affected by the earthquake

Our Response

During Lombok earthquake emergency relief, WVI aimed to alleviate sufferings from the earthquake and strengthen the resilience of children and communities by delivering these activities:

- **Non-Food Items (NFI) Distribution**
  WVI distributed various NFI packages to communities consisting of family kits, children kits, hygiene kits and school kits during emergency phase.

- **Child in Emergencies**
  Provision of psychosocial support for affected children was carried out through Child Friendly Space (CFS) and mobile library. Since some of school buildings in affected areas are damaged, temporary learning spaces were set up and school furniture consisted of desks and chairs were provided to support children educational needs. Safe-school trainings and simulation for school teachers and children were also carried out to strengthen their resilience, to be prepared and to respond to emergency situations.

- **Health and Nutrition**
  Main activities in health and nutrition sectors were setting up Infant and Young Child Feeding (IYCF) kitchen and promoting nutrition to communities in evacuation camps. IYCF trainings for health workers and community health volunteers were also conducted to enable them to deliver nutrition promotion in integrated health-post (posyandu).

- **Water, Sanitation, and Hygiene (WASH)**
  Emergency latrines and water points were constructed to improve access to WASH facilities, along with hygiene promotion to promote good hygiene practice. Water provision through water-trucking was done to address basic water needs.

- **Cash Based Programming (CBP)**
  WVI contributed in providing cash assistance to affected communities through cash-for-materials and cash-for-work activities during emergency and early recovery phases, to enable them to meet their basic needs.

**RESPONSE DURATION:**

- 3 months for emergency response (31 July 2018 - 31 October 2018)
- 6 months for early recovery (1 November 2018 - 30 April 2019)
- 12 months for recovery & rehabilitation (1 May 2019 - 30 April 2020)

**Funding Target:** USD 3,356,264

**Funding Secured:** awarded funding per 31 July 2019 is USD 2,782,799

**Funding Gap:** USD 573,464

**Target Number of Beneficiaries:**
25,000 households (approximately 100,000 people) with Non-Food Item (NFI) Distribution, Child in Emergencies, Health and Nutrition, Water, Sanitation and Hygiene (WASH), Cash-Based Programming and Temporary Shelter Construction.

**Operational Areas:**
Targeted areas: North Lombok and East Lombok Sub-districts.

NON-FOOD ITEM (NFI) DISTRIBUTION

During the emergency phase, WVI distributed various NFI packages to support immediate needs of affected communities. Packages consisted of family kits, children kits, and school kits were distributed to communities in evacuation camps. A total of 5,734 households received family kits: tarpaulin, blanket, plastic mat, towel, toiletries, flashlight and water bag.

Meanwhile, a total of 1,219 infants and toddlers received children kits contains of blanket, towel, baby soaps, sheets, socks, and mosquito nets. School kits contain of uniform, bag and school supplies were distributed to 1,472 children in East Lombok and North Lombok.
CHILD IN EMERGENCIES

Lombok earthquake caused more than 19,000 children in assisted areas live in emergency. During this situation, children need protection, psychosocial and educational support to help them recover and continue their lives. WVI provided 39 Child Friendly Spaces (CFS) integrated with mobile library and trained 78 local tutors to facilitate CFS activities. The total of 4,902 children attended CFS and enjoyed recreational activities such as reading and coloring books, playing games, making handcraft and learning about self-protection during emergency situations. Meanwhile, in district level, WVI with others Agency conducted Education in Emergencies (EiE) and Child Protection in Emergencies (CPiE) trainings for 517 teachers and education department officials in Lombok (East Lombok, West Lombok, Central Lombok) and Sumbawa to equip them with capacity to provide education and child protection supports at schools in emergency situation.

Due to school building damages in affected areas, WVI set up 11 temporary learning spaces to support educational needs for 1,223 children. Furthermore, WVI conducted disaster risk reduction (DRR) trainings and disaster preparedness simulation at school level to strengthen more than 1,000 children and teachers with capacity and resilience to be prepared and to respond to emergency situations. To support school activities, WVI already distributed 238 and will continue the distribution of the remaining 1,682 sets of furniture (consisted of desks and hairs) to 24 elementary schools.

HEALTH AND NUTRITION

During emergency situation, children are more susceptible to suffer from malnutrition due to inadequate food intake and acute diseases. WVI provided infant and young child feeding (IYCF) kitchens and conducted nutrition promotion in evacuation camps to enable communities to provide and access proper food for their children.

A total of 245 health workers and community health volunteers (CHVs) were trained on IYCF by WVI. Now, they are able to deliver better service in posyandu, also conducted nutrition promotion that benefited 4,151 mothers and children under 5 years of age.
WATER, SANITATION, AND HYGIENE

Communities affected by the earthquake are more prone to illness caused by infectious diseases. Those diseases are related to inadequate sanitation, water supplies, and hygiene promotion. Based on assessment results, more than half of displaced people practiced open defecation and didn’t have access to clean water.

Until July 2019, WVI distributed 611 water tanks and constructed 1,278 emergency latrines and distributed 4,680,550 liters of water; resulted 611,415 people have accessed to WASH services in East Lombok and North Lombok. To address the needs of limited hygiene items in evacuation camps, WVI also distributed 809 family hygiene kits and 456 children hygiene kits during emergency phase. Along with WASH facilities construction and hygiene kits distribution, WVI conducted hygiene promotion that focused on hand-washing with soap and stop practicing open defecation campaigns to 18,235 people, including 5,276 children. A total of 43 community water committees were also activated to hold responsible for the management of WASH facilities in their sub-villages.

CASH BASED PROGRAMMING

WVI contributed in providing cash assistance to affected communities through cash-for-materials and cash-for-work during emergency and early recovery phases, enabling them to meet their needs. Cash-for-materials intervention benefited 109 households as they utilized the cash in amount of IDR1,500,000 (USD 107) to buy materials needed as a complementary to their temporary houses in East Lombok.

Meanwhile, based on prior assessment, Lombok earthquakes caused houses and buildings damage and job loss that led to household income decrease. Therefore, WVI contributed in addressing the problems by conducting cash-for-work intervention that involved 1,052 households to clean up earthquake rubble in North Lombok.

Each household earned IDR400,000 (USD 28.5) to fulfill their basic needs and strengthen their capacity to continue their economic activity in early recovery phase.
ACCOUNTABILITY

WVI is committed to working in a transparent and responsible way that builds trust and respect of all children, communities and stakeholders through the response implementation. There are 741 feedbacks received from November 2018 until July 2019 from 505 people. 49% of the feedbacks express gratitude for the aid provided, 41% provided suggestions on the goods/aid they wished to receive (top 3 community needs are school kit, water tank and latrine), 5% are on queries, 3% are non-sensitive complaints and the remaining 1% are sensitive complaints. These feedbacks were collected using suggestion box, helpdesk, face-to-face meeting and call center.

COMMUNICATION

VIP/Media/Donors Visits (since last Situation Report)

- Donor representative of IBM, PPM Management School, We are Water, IKEA and WV Germany had visited the areas of operation.
- Five local Child Sponsors of WVI’s regular programming visited the response areas and got involved in the painting and branding of WASH projects (water points & latrines) and the temporary schools built by Wahana Visi Indonesia.
- Four media people from Jawa Post, Okezone, Antara Mataram, and Suara NTB also visited the areas of operations within the period.

Digital and Media Engagement

- 32 Posted or published stories and photos on WVI website.
- 59 Posted stories and photos on social media across global.
- 130 Documents posted for external sharing at Relief Web (a learning website for internal organization).
- 66 Situation Report posted for external sharing at Relief Web.

   - Somewhat satisfied and Not satisfied 16.5%
   - Don't know if mechanism available 2.1%

*Based on survey of 17 villages in East Lombok Regency*
What They Say

“I still remember when Wahana Visi Indonesia came into our office a day after the earthquake. WVI becomes the first NGO who comes to help us. WVI gives us assistance especially for our basic needs such as toilets and clean water. Hopefully what you've given to us will be paid by the best reward from God” – H. Lalu Kanahan, Headman of Sajang Village, East Lombok Regency.

“Thank you to Wahana Visi Indonesia. On behalf of the local government, the social service of West Nusa Tenggara, we would like to thank for what you have done, to become our devotion to humanity and our deeds” - Chandra Aprinova, Head of Section for Social Protection for Victims of Natural Disasters of West Nusa Tenggara Provincial Social Service.

“We would like to thank you to Wahana Visi Indonesia for giving us not only assistance but also the knowledge. Wahana Visi Indonesia assisted us to live healthy and clean even though we are still in the emergency situation” – Nurani, cadre of Sajang Village.

Going Forward

PLANS

During recovery and rehabilitation phase, WVI will continue its operations in North Lombok with focus on temporary shelter construction, WASH, Child in Emergencies and Cash Based Programming. To address the existing need of the community for temporary shelters, WVI in close collaboration with North Lombok government and PKPU Human Initiative will support the construction of 426 temporary shelters in North Lombok.

Furthermore, WVI will continue the disaster risk reduction and child-case referral system trainings to strengthen the capacity and resilience to prepare and respond against emergency situations and child violence at school level. In WASH sector, WVI will continue to build latrines and water points, and conduct health promotion at schools that still have remaining needs on WASH. To support education activities, WVI will continue distributing 1,682 sets of furniture (consisted of desks and chairs) to 24 elementary schools.

ADVOCACY

WVI will continue in involving government and related stakeholders during planning, implementation and evaluation of shelter construction, WASH, Child in Emergencies and Cash Based Programming interventions. In April 2020, during project closure, WVI will conduct end-of-project workshop with government to share the result and lessons learned during its operations in Lombok. It’s expected that government will continue the good practices to prepare and response against emergency situations.
WVI is Still Running Family Kit Distribution in Lombok

#LOMBOKBANGKITKEMBALI

After more than three months implementing Lombok Earthquake Emergency Response, Wahana Visi Indonesia (WVI) was still distributing family kits in several Lombok’s regencies. One of the distribution programs happened in Sokong Village, North Lombok Regency.

Efendi (34 yo), headman of Getak Gali Subvillage said WVI conducted second distribution in Getak Gali Subvillage. About 185 households in the village received family kits on Wednesday (November 28, 2018).

In the first distribution, communities of Getak Gali already received school kits. Those kits are used by the children to support their education activity.

Marni (35 yo), one of the villagers who just came back from evacuation post said the school kits that she received really helped her children to start learning activity at school.

“Alhamdulillah, my children used the distributed kit. The kit is very needed, indeed”

Marni

According to Efendi, not only the non-food items (NFI) distribution, but people of Getak Gali also received the emergency toilets and water tanks.

Efendi said, after the earthquake hit in July, it was difficult for people to find clean water in Getak Gali Subvillage. Especially because the water source was contaminated by the sulphur.

“The water source has changed. It has contaminated by the sulfur so that people hard to find clean water for drink,” he added.

However, after three months living in challenging situation, people of Getak Gali now encouraged themselves to go back to their own houses. Currently they are living in their home yard and build temporary shelters using debris and other local materials.

For now, Wahana Visi Indonesia have already distributed the NFI to 18,127 households in Lombok with total target of 25,000 households. The distribution process will still be running until the end of the emergency response program.

Written by Putri Anne Barus, Communications Officer Wahana Visi Indonesia
"The tent was very hot, but not this class."

- Qonita -

The big earthquake that hit Lombok a year ago caused devastation of public facilities. Including education facilities that have the highest damage-value up to 1,194 unit of facilities. Furthermore, about 9,311 children were also impacted from the earthquake and needed protection, psychosocial support, and education.

Based on the fact, Wahana Visi Indonesia (WVI) through Lombok Earthquake Emergency Response (LEER) collaborated with IBM Indonesia company created child-friendly spaces and temporary learning centre in several schools with damaged buildings.

WVI selected two schools of Early Childhood Care and Development (Pendidikan Anak Usia Dini/PAUD) in Sokong Village, North Lombok District to implement the program. About 61 students had to learn in a tent during the construction process.

"I still remember when we wanted to pray in Saturday morning before using the new classrooms on Monday. Unfortunately, the earthquake stroke on Monday night and broke the building, so we can’t use it anymore," said Emi, one of the tutors of PAUD, recalling the incident.

Emi tells about how important the tent is for the learning process at school after the earthquake. Unfortunately, she and her students did not have a proper tent. The stayed and learned in a tent that is made from banners and billboards. Emi is really grateful to have the opportunity of receiving good temporary class rooms so she and her students did not need to feel the heat inside the tent.

"The tent was very hot, but not this class," said Qonita, one of the students who received assistance.

Emi also explains that the conditions of teaching and learning at a tent really made children uncomfortable.

"We are grateful that we received this classroom because it was really hot in the tent and the children are forced to go home at 9 o’clock. Although this classroom is also hot, students can stay at least until 10 or 10.30 because it’s less hot and we just use the used banners," Emi continues.

During child-friendly space activity, children in Lombok are encouraged to participate in reading, colouring, playing together, making crafts and learn about health in disaster situations.

Every child has the right to be educated and to have a decent life. Being in a disaster situation does not mean they do not have access to obtain a proper education. Through these temporary learning centre and child-friendly space activities, children’s welfare can be fulfilled and children can live a full life.

Lombok Earthquake Emergency Response: 365 Days Report

July 2019

21

“When I arrived here, the community and children suffered from diseases. Mothers were often stressed and psychologically affected by the earthquake.”

-Laila Mardiana-

WVI Brings Health Volunteers to Lombok

The community and children have stayed at the evacuation centre for more than 14 days. Other problems are then found, including the rising number of sick people and children suffering from illness such as diarrhoea, acute respiratory infection, fever and diseases caused by psychosocial factor. The illness is not only caused by the bad condition of evacuation posts but also the limited practice of clean and healthy living behaviour.

To respond to this problem, Wahana Visi Indonesia (WVI) working with The Indonesian Doctors Association (IDI) brings some medical volunteers to Lombok.

“Considering many needs of medical personnel in the field, we work with IDI to open up voluntarism opportunities for medical personnel to respond to community’s health issues. At present, we have brought some doctors and nutritionist volunteers. These volunteers will come to Lombok regularly,” said Margaretha Siregar, Director of Humanitarian Emergency Affairs, WVI.

“With this condition, the mothers are not in optimal condition to feed their children,” said Laila Mardiana, one of the nutritionist volunteers of WVI.

According to Laila, children also experience psychosocial impacts. Therefore, WVI and the medical volunteer focus on providing full assistance so that mothers at the evacuation post can continue to breastfeed their babies and provide variety of food for the children. Furthermore, WVI will also educate the affected community to practice clean and healthy living behaviour by washing their hands with soap before eating.

Medical volunteers will focus on assessing health conditions and providing nutrition for the affected communities in Lombok by following up Infant and Young Child Feeding kitchen and providing friendly spaces for pregnant women, nursing mothers, under-five children and girls. For children who are psychologically affected, WVI also provides Child-Friendly Spaces. In each a session which lasts for 1.5 hours, the children are invited to join in fun activities such as singing, playing games and drawing.

STORIES

WASH

A Wheelchair and New Toilets of Ati

Sukriati, usually called Ati, is a woman from Sandongan Subvillage, East Lombok District, cannot do many things due to the physical disability in her legs. With this limitation, she had to try very hard to evacuate when the first earthquake hit Lombok last July 2018.

At that time, Ati was relaxing in her room. In a sudden, her house was trembled. She realized that it was an earthquake. She tried to save herself as soon as possible.

“I tried to save my life by crawling to the porch of the house. But when the second aftershock came, I immediately left the house and went away from the house using my wheelchair,” said Ati, recalling the day.

A wheelchair is Ati’s mainstay tools. She has her own wheelchair equipped with handlebars like bicycle which is specifically made for her. Ati often uses the wheelchair to accompany her for outdoor activities, including going to the new toilets that is also specially built for her.

The simple toilet provided by the Lombok Earthquake Emergency Response of Wahana Visi Indonesia is located right outside Ati’s house. According to Ati, the old toilet located inside the house was damaged by the earthquake. Since the construction of the new toilet, Ati and her family, including people from other subvillage, can use the toilet any time.

“Before, I was afraid and often forbore myself to go to toilet. After the new toilet is built for me, now I am not worried anymore. I can go to the toilet any time I need to,” said the 28-year-old woman.

With the current toilet, it is now easier for Ati to bring her wheelchair in. She can freely use the toilet despite her limitations.
“We use that money to buy building materials such as bamboo, woods, roof, et cetera and use it for a temporary house. Thank God, after we finished the building, my children feel so happy”

-Murni-

Cash Based Program Helps People from Rain and Cold

Similar with other locations in Indonesia, the rainy season also happens in Sambelia Subdistrict, East Lombok. After the earthquake hit Lombok in August 2018, people in this area lost their home and stayed in the evacuation posts or built temporary houses from tarpaulin or cloth.

The temporary house is far from perfect. If the rain comes, the people in the house often feel uncomfortable and cold. Based on the condition in Sambelia Sub-district, Lombok Earthquake Emergency Response (LEER) of Wahana Visi Indonesia committed to help people and give them cash money by running the cash-based program.

Padak Goar Village is one of implementation areas of this program.

The program is for selected people or households. Only households that met the set criteria, such as a family with a pregnant woman, infant, baby, or the elderly who can get cash money.

Each family receives IDR 1,500,000 and they are advised to use that money for making temporary houses rather than buying daily needs.

Henny Lusia, the Cash Coordinator of LEER says Wahana Visi Indonesia implemented the Cash Based Programming to keep affected people dignified. It is also to implement an external commitment of World Vision, as Wahana Visi Indonesia’s partner, to give 50% of the donation for humanity.

Murni, one of the villagers, says the cash money really help her family to build a temporary house. After building the house, her children never get cold anymore.

“We use that money to buy building materials such as bamboo, woods, roof, et cetera and use it for a temporary house. Thank God, after we finished the building, our children feel so happy,” she claims.

Not only Murni who feels glad, but also Hasanudin. He has made the temporary kitchen by using the money he received from Wahana Visi Indonesia. Even though he did not have any income for the last three months, Hasanudin still can provide the best for his family.
